Part One
- For each chapter (including the Introduction), you get to write out a detailed outline or notes covering the main points of the chapter. This assignment should be in your own words and not copied from any source. You may use any format that you like. There will be some topics that you are not familiar with or unsure of and it is up to you understand these themes/topics. As you research these terms and concepts, please include the information that you find (as well as the source) in your outline/notes. You should differentiate this text from the book notes in some way (highlight, different text color, indents, etc.) so that I can easily see what you researched.
- Be prepared for a quiz on the first day of class.

This portion of the assignment is due Wednesday, August 5, 2020 by 5:00 p.m. and should be submitted digitally through Google Docs. If you choose not to complete this assignment by the due date, you will not remain in this class.

Part Two—ONLY for those students who have not had a high school Biology class.
Read and understand Chapters 4-7 in *Campbell Essential Biology* (4th ed) by Simon, Reece, and Dickey. You do not need to get a copy of this textbook. I have given you access to a PDF of this reading.
- For each chapter, you should write out a detailed outline or summary covering the main points of the chapter, including the definitions of the main terms. You may need to refer to other sources to help you understand some of the topics.

This part of the assignment is due the first day of class.

If you have any questions throughout the summer, please email me at dword@stfrancisschool.org, and I will get back to you as soon as possible.
